CSE0001: Digital Literacy Project Report

Name: Arpit Parmar
Reg No.: 25BAI11617
Branch: Computer Science (AI&ML) Engineering
Course Code: CSE0001
Date: March 25, 2026

Introduction

This project was completed as part of the Digital Literacy course requirements for the Student Digital Ambassador role. The primary objective was to build a comprehensive Digital Literacy Portfolio that demonstrates proficiency in professional online presence, digital security, and collaborative tools. This report documents the completion of five specialized tasks—ranging from creating awareness infographics to researching cybercrime prevention—all organized within a professional GitHub repository.

Task 1: Digital Literacy Awareness Infographic

For this task, I designed a one-page visual resource using Canva to help my peers understand the pillars of digital literacy. My infographic focuses on three key areas: professional online presence, safe internet practices, and essential digital tools for engineering students. One interesting aspect of this task was learning how to simplify complex information into a visually engaging format. The most difficult part was choosing which information to prioritize to ensure the design remained clean and readable.

Task 2: Build Your Student Digital Portfolio

I established professional profiles on GitHub, LinkedIn, and Stack Overflow. LinkedIn serves as my primary professional network for connecting with the academic community, while GitHub acts as a technical gallery for my coding projects. On Stack Overflow, I can engage with developer Q&A to solve technical hurdles. Over the next four years, I plan to use these platforms as a 'living resume' by consistently updating my skills, projects, and certifications.

Digital communication is a core skill for any professional. I drafted two professional emails: one requesting a deadline extension from a professor and another expressing interest in an internship opportunity. Through this, I learned that clear subject lines and a respectful tone are more important than the length of the message.

Task 5: Cybercrime Awareness & Prevention

While researching Phishing and UPI Fraud, I was most surprised by how sophisticated social engineering tactics have become, especially targeting college students in India. One habit I will personally change is enabling two-factor authentication (2FA) on all financial accounts and being more cautious of unsolicited links.

Conclusion

I utilized HackerRank to complete a beginner-level coding challenge, which helped me familiarize myself with competitive programming environments. Additionally, I built a 'Digital Literacy Awareness Quiz' using Google Forms linked to a Google Sheet for response tracking. These tools will be vital in my academic career for collecting data during research and practicing core programming logic.
